## 15.5: External quality assurance

It is important that any laboratory performing this testing for clinical purposes participates in some sort of external quality assurance scheme. There is a National External Quality Assurance Scheme (NEQAS) available for molecular blood grouping. The International Society of Blood Transfusion (ISBT) organises workshops every 2 years in which DNA samples from 'patients' and plasma from D negative pregnant women are distributed. In addition, it may be possible to set up sampleexchange schemes with other laboratories carrying out similar work.
