

**PRE-HOSPITAL CARE  
& MASSIVE  
TRANSFUSION-  
A MILITARY  
PERSPECTIVE**

Ian Nesbitt  
Consultant in Anaesthesia &  
Critical Care  
Freeman Hospital  
Newcastle upon Tyne

# Introduction

- ▣ Why me?
- ▣ Why this talk?

# Overview

- ▣ Differences between military/civilian PHC
- ▣ What is Military Massive Transfusion?
- ▣ Military management of Massive Transfusion
- ▣ Evidence...
- ▣ Practicalities
- ▣ Research
- ▣ Questions

# Evacuation Chains

## ▣ Civilian

- ▣ Point of Injury
- ▣ Recovery by Ambulance Service
- ▣ Definitive treatment in Hospital

▣ (Referral for Specialist Care)

▣ <100km

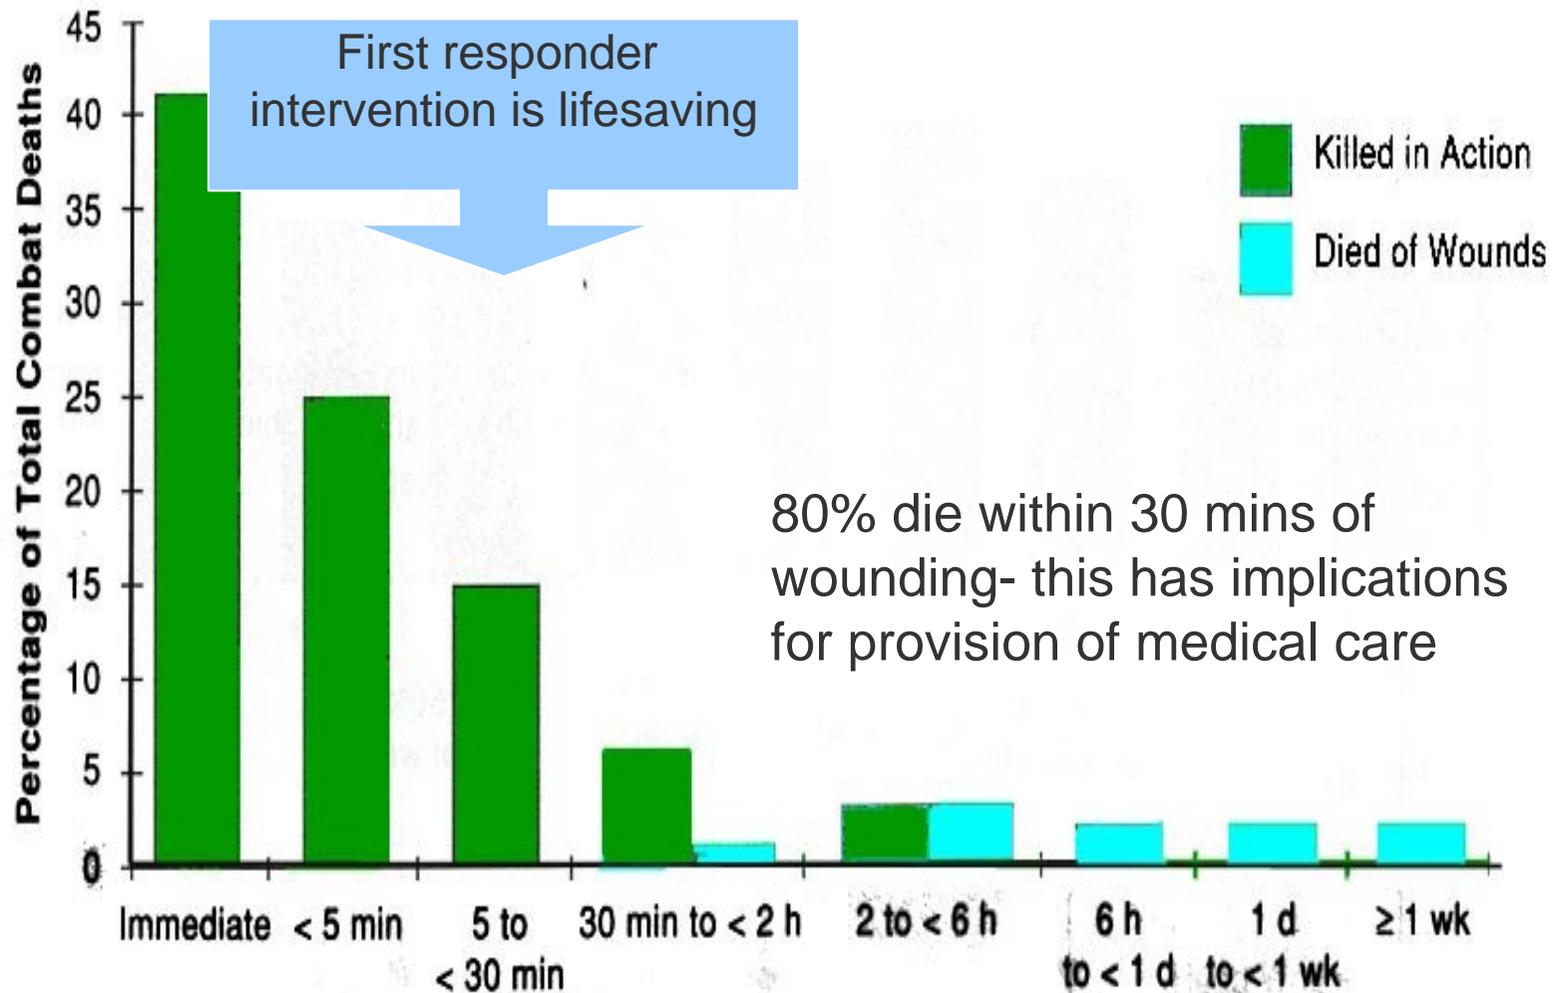

## ▣ Military

- ▣ Point of Injury
- ▣ Self/Buddy Aid/Team Medic
- ▣ Casevac
- ▣ Initial treatment role 2 (+)
- ▣ Tactical CCAST
- ▣ Strategic CCAST
- ▣ RCDM

▣ 1000km+

# The platinum ten minutes

## US Army Vietnam

- ▣ So- military casualties are different.
- ▣ Can we still learn from them?

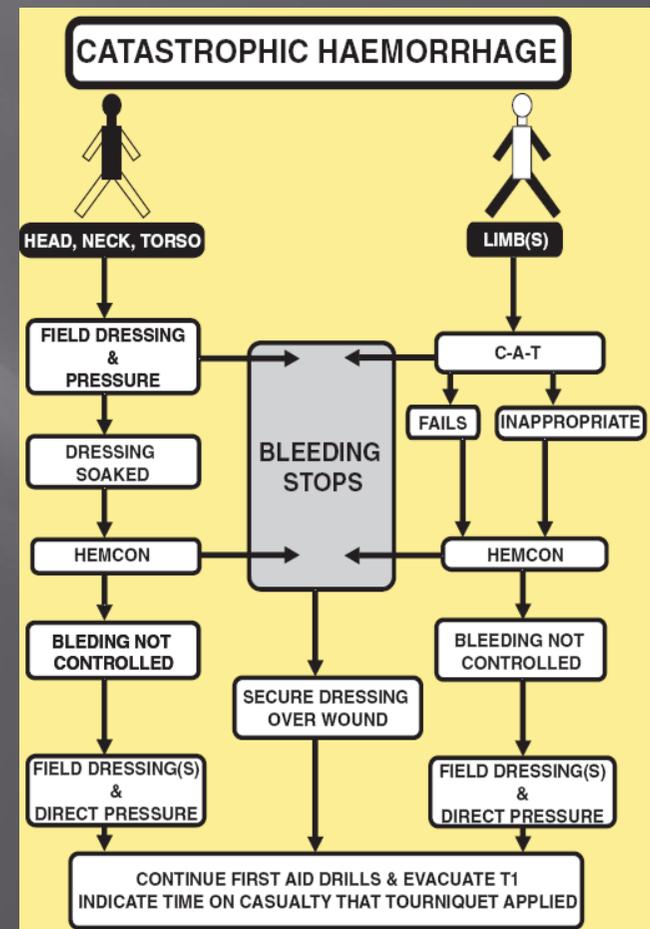

# New wars, new ideas

## Traditional ATLS teaching- ABCDE

- Stabilise for surgery
- Definitive surgery early
- Tourniquets are bad

## New paradigms:

- C-ABc
- CAT
- DCR & DCS

# **Immediate management: Haemorrhage Control**

- ▣ Early: FFD, Tourniquet, Haemostatics
- ▣ Later: ACoT treatment

# New Ideas: ACoT

- ▣ 25% arrive in ED with coagulopathy
  - ▣ Incidence increases with severity of trauma
  - ▣ Multifactorial
    - Fibrinogen
    - ▾
    - Acidosis related platelet dysfunction
    - Dilutional
    - Consumption of factors

# Changes in Military Transfusion Practice

- ▣ Evolving Information/Evidence
  - ▣ Observational, multiple data bases
- ▣ Military v NHS
  - ▣ rapid changes in doctrine possible
  - ▣ CRASH 2 (& subsequent observational studies)
  - ▣ ROTEM/TEG

# Military Pre-Hospital Care

## **MERT offers:**

- Haemorrhage Control
- Airway Management
- Analgesia & Anaesthesia
- Chest Drains
- Blood & Products
- Complex Decision making
- Overflight to surgery

# Military Massive Transfusion

- ▣ Definitions
- ▣ Historical Management
- ▣ Changing demographics allied to rapid transfer

# What is a massive transfusion?

- ▣ Civilian practice:
  - 100% BV 24hrs
- ▣ Military practice:
  - Life threatening bleeding
    - 50% BV 3hrs
    - 100% 24hrs
    - 150ml/min

Protocol	Salient Features
Riskin et al <sup>102</sup>	<ul style="list-style-type: none"> <li>• Definition of massive transfusion: anticipation that &gt; 10 units PRBCs will be required in resuscitation</li> <li>• Who can activate the protocol: anyone</li> <li>• FFP:PRBC ratio: 1:1.5</li> <li>• Given in packages of 6 units PRBCs, 4 units FFP, and 1 unit apheresis platelets</li> </ul>
Cotton et al <sup>103</sup>	<ul style="list-style-type: none"> <li>• Definition of massive transfusion: attending surgeon thinks patient will need &gt; 10 units of blood</li> <li>• Who can activate the protocol: attending surgeon</li> <li>• FFP:PRBC ratio: initially ~1:2.5; subsequently, 1:1.5</li> <li>• Given in packages. Initial package: 10 units PRBCs, 4 units FFP, and 2 units single-donor platelets. All subsequent packages: 6 units PRBCs, 4 units FFP, and 2 units single-donor platelets</li> </ul>
Dente et al <sup>104</sup>	<ul style="list-style-type: none"> <li>• Definition of massive transfusion: &gt; 10 units of PRBCs anticipated in 24 hours</li> <li>• Who can activate the protocol: ED, surgery, anesthesia, ICU</li> <li>• FFP:PRBC ratio: 1:1</li> <li>• Given in packages of 6 units PRBCs, 6 units FFP; 1 unit apheresis platelets given with every other package delivery</li> </ul>

# UK military MTP

- ▣ 11% of UK casualties have MTP (10u/24hr)
- ▣ 20% of MTP have >100u
- ▣ Mean 22u, max 237u/24h
- ▣ 85% survival

# Military MTP

Shock Pack 1  
4RCC & 4FFP

TXA1g; 10ml CaCl<sub>2</sub>

Shock Pack 2  
4RCC & 4FFP  
& 1 ATD plts

10ml CaCl<sub>2</sub>

Shock Pack 3  
4RCC & 4FFP  
& 1 ATD plts  
& 1 pool cryo

10ml CaCl<sub>2</sub>

? Dextrose/insulin

?? FVIIa; FWB

ROTEM

Hct 0.3; Plt >100; Fib >2; T 36°C; BX >-2; Ca<sup>++</sup>>1.0

# Fresh Whole Blood

- ▣ Used in WWI & II
- ▣ Uncommon in Civilian Practice
- ▣ 10-15% of US military use
- ▣ Walking donor pool
  - (inc platelet donation)

# Issues

- ▣ Cold Chain – 5000miles
- ▣ Afghan temperatures (-25-+50°C)
- ▣ Rapidly warming blood
- ▣ Tracking transfusions

# What else is (more) important?

Rapid access to:

- Appropriate surgery
- Decision Makers-  
Damage Control Surgery  
& Investigations
- Blood & products
  - (Bastion c.f NHS)
- Monitoring

# Ongoing research

- ▣ Haemostatic Resuscitation
  - Cryoprecipitate, Prothrombin Complex Concentrate, Antifibrinolytics, lyophilised plasma (LyoPlas N)
- ▣ Freeze dried products
  - E.g. platelet derived haemostatic agent-PDHA, platelet microparticles etc
- ▣ Oestrigen, Haemoglobin substitutes

# Blue Skies & Beyond

- ▣ Hypothermic acellular resuscitation
  - (Emergency Preservation & Resuscitation- EPR)
- ▣ Animal in vivo experiments
- ▣ Human Clinical trial started
  
- ▣ H<sub>2</sub>S, LT69L
  
- ▣ Space surgery
  - ▣ Robotics, foam packing

# Lessons for Civilian care

- ▣ MTP Rarely required in civilian practice
- ▣ Concepts are transferrable
- ▣ MTP is only one part of whole trauma care

# Summary

- ▣ Military care different from Civilian care
  - ▣ Different casemix
  - ▣ Different Product requirements
- ▣ But applicable lessons/concepts
- ▣ Dynamic response
  - ▣ DCR/DCS/Whole body CT etc
  - ▣ Products before results
  - ▣ Major haemorrhage packs
- ▣ Educated sensible discussion with colleagues

Questions?
