# Guidelines for the Blood Transfusion Services

## Tables

http://www.transfusionguidelines.org/red-book/tables

## Tables

- **Table 2.1** List of some key inspection/licensing/accreditation/certification standards
- **Table 3.1** Extra-corporeal volume tables
- **Table 3.2** Citrate anticoagulants
- **Table 6.1** Discard limits
- **Table 7.1** Whole Blood, Leucocyte Depleted – additional tests
- **Table 7.2** Red Cells, Leucocyte Depleted – additional tests
- **Table 7.3** Red Cells in Additive Solution, Leucocyte Depleted – additional tests
- **Table 7.4** Red Cells, Washed, Leucocyte Depleted – additional tests
- **Table 7.5** Red Cells, Thawed and Washed, Leucocyte Depleted – additional tests
- **Table 7.6** Platelets, Pooled, Buffy Coat Derived, Leucocyte Depleted – additional tests
- **Table 7.7** Platelets, Apheresis, Leucocyte Depleted – additional tests
- **Table 7.8** Platelets in Additive Solution and Plasma – additional tests
- **Table 7.9** Platelets in Additive Solution, Leucocyte Depleted – additional tests
- **Table 7.10** Granulocytes, Apheresis – additional tests
- **Table 7.11** Granulocytes, Pooled, Buffy Coat Derived, in Additive Solution and Plasma – additional tests
- **Table 7.12** Fresh Frozen Plasma, Leucocyte Depleted – additional tests
- **Table 7.13** Fresh Frozen Plasma, Methylene Blue Treated and Removed, Leucocyte Depleted – additional tests
- **Table 7.14** Cryoprecipitate, Leucocyte Depleted – additional tests
- **Table 7.15** Cryoprecipitate Pooled, Leucocyte Depleted – additional tests
- **Table 7.16** Plasma, Cryoprecipitate Depleted, Leucocyte Depleted – additional tests
- **Table 7.17** Red Cells for Intrauterine Transfusion (IUT), Leucocyte Depleted – additional tests
Table 7.18 Whole Blood for Exchange Transfusion, Leucocyte Depleted – additional tests

Table 7.19 Red Cells for Exchange Transfusion, Leucocyte Depleted – additional tests

Table 7.20 Red Cells for Neonates and Infants, Leucocyte Depleted – additional tests

Table 7.21 Red Cells in Additive Solution for Neonates and Infants, Leucocyte Depleted – additional tests

Table 7.22 Fresh Frozen Plasma, Neonatal Use, Methylene Blue Treated and Removed, Leucocyte Depleted – additional tests

Table 7.23 Cryoprecipitate, Methylene Blue Treated and Removed, Leucocyte Depleted – additional tests

Table 7.24 Platelets for Intrauterine Transfusion, Leucocyte Depleted – additional tests

Table 7.25 Platelets for Neonatal Use, Leucocyte Depleted – additional tests

Table 8.1 Steps for evaluation of novel components

Table 8.2 Evaluation of new red cell components for transfusion: recommended tests

Table 8.3 In vitro assessment

Table 8.4 Evaluation of new platelet components for transfusion

Table 8.5 Evaluation of novel plasma components

Table 8.6 Summary of testing numbers required for evaluations and validations

Table 9.1 Screening required for blood donations

Table 9.2 Screening required for tissue and stem cell donations

Table 11.1 Label colour coding

Table 11.2 Grading system for serological tests

Table 11.3 Requirements for conventional blood typing reagents

Table 11.4 Chequerboard test format

Table 11.5 Complement C3 and C4 activation

Table 12.1 Minimum release criteria for blood products with antibodies of probable clinical significance

Table 12.2 Test monitor red cell samples

Table 15.1 Some blood group polymorphisms and associated gene sequence changes

Table 16.1 HLA antigens that are defined by serological typing (with broad specificities shown in brackets)

Table 16.2 Characterisation of HLA-specific antibodies

Table 17.1 Current nomenclature for HNA and corresponding antibodies
Table 18.1 Current HPA nomenclature
Table 21.1 Temperature/time relationships for banked tissues
Table 21.2 Minimum donor/recipient data set to be kept
Table 22.1 Requirements for the timing of testing
Table 22.2 Label content adapted from FACT-JACIE
Table 22.3 Label content for HPC-C adapted from NetCord-FACT
Table 23.1 Standard blood group classifications
Table 23.2 Usage limitation
Table 23.3 Blood group and donation use label text
Table 24.1 Statements of product status
Table 25.1 Envelope definition
Table 25.2 Message protocol numbers
Table 25.3 Message protocol 000001: blood component dispatch information: administration line
Table 25.4 Message protocol 000001: blood component dispatch information: dispatch line
Table 25.5 Message protocol 000001: blood component dispatch information. Field 10: red cell phenotype field – antigen codes
Table 25.6 Message protocol 000001: blood component dispatch information. Field 14: platelet-specific phenotype
Table 25.7 Message protocol 000002: blood derivative dispatch information: administration line
Table 25.8 Message protocol 000002: blood derivative dispatch information: dispatch line
Table 25.9 Message protocol 000003: reagent dispatch information: administration line
Table 25.10 Message protocol 000003: reagent dispatch information: dispatch line
Table 25.11 Message protocol 000004: blood component dispatch acknowledgement: administration line
Table 25.12 Message protocol 000004: blood component dispatch acknowledgement: dispatch line
Table 25.13 Message protocol 000005: blood component fate information: data line
Table 25.14 Message protocol 000005: blood component fate information. Field 8: wasted classification code
Table 26.1 Blood bag base label dimensions (width × depth)
Table 26.2 Manufacturers’ Codabar codes
Table A1.1 Serological, virological and other preparations
Table A1.2  Coagulation preparations – WHO International Standards

Table A1.3  Coagulation preparations – British Standards

Table A2.1  Mapping from characters to ISO 7064 check values

Table A2.2  Example of displayed numbers
